

Gameline Taping Machine

A must-have tool for gym floor professionals!

Quality. Always.

The Gameline Taping Machine is a perfect example of combining modern materials and fabrication techniques with the care and hand-built craftsmanship of yesterday.

A True Heavyweight.

The Gameline weighs in at a hefty 20 pounds. This extra mass lays straight and curved lines easier and without the need for the mechanic to apply additional pressure. Tape application is faster, cleaner, and far less strenuous.

Powder Coated Body.

Heat cured powder paint remains chip resistant, corrosion and maintenance free.

Precision Machining.

Billet spools are machined to exacting tolerances to eliminate jobsite hassles. No more wobbles or ill-fitting tape rolls.

Graduated & Calibrated Line Ruler.

Click the spools through each of the easy adjusting detents to achieve the perfect line size, at a glance. Line width changes are tool-less and fumble free.

Urethane Wheels.

Made with the same compound as our Ryder wheels to guarantee that they are non-marking and have a long life. Interior or exterior use.

Integrated Accessories.

The included quick disconnect pole and attached pointer allows for basic straight layout and application of circles up to 12' in diameter. Add the optional extendable pole, center support, and one-man pivot plate to single-handedly create three-point arcs for all levels of game play.

Customizable.

- Want to celebrate your team with a custom color?
- Need different diameter tape spools for glow or temporary tape?
- Custom guide arms?

Our in-house manufacturing and assembly affords us the flexibility to make unique one-off bodies and components.
