INNOVATION
CENTER

1

IMPROVE CASE QUALITY

- Case erectors provide **consistency in tape application and box squareness**, improving stackability
- Manual box erection often results in misaligned flaps, weak seals, or poor structure, leading to **inconsistent case quality and risking product protection and brand perception**

2

INCREASE THROUGHPUT

- An operation packing more than **3 cases per minute** can typically justify a case erector
- Even entry-level case erectors can **triple the output** of one employee hand-erecting

3

SAVE FLOORSACE

- Pre-erecting and storing hundreds of boxes **consumes significant warehouse space** that could be used for inventory or production
- Automating this process can **save thousands of square feet**, and reduce overtime wages needed to erect boxes before shifts
