INNOVATION
CENTER

1

REDUCE TAPE USAGE

- Case sealers provide **consistency in tape application**, in both length of tape and sealing quality
- Hand taping often leads to **excess tape use and inconsistent seals**, increasing material waste and reducing package reliability

2

INCREASE THROUGHPUT

- Even operations shipping as few as **150 cases daily** can justify a case sealer through improved efficiency and reduced labor costs
- Investing in automation now allows your customer to **plan for future growth**, while immediately boosting productivity

3

IMPROVE ERGONOMICS

- **Packers can easily harm themselves during hand taping**, potentially cutting themselves or experiencing long-term wrist injuries from repetitive motions
- Automating your case sealing operation **protects employees from injury** by eliminating many of these safety risks
